

Characteristics

Features of the the Magic Peeling Exfoliator Glove®:

The Magic Peeling Exfoliator Glove® is made of a cellulose fibre extracted from the plant broom of the Ginestra plant, therefore absolutely natural, it is as soft and light as silk and is also of the same consistency.

Ginestra

100% natural cellulose fibres,
extracted from the plant broom.

The secret of the Magic Peeling Exfoliator Glove's® effectiveness lies in how it is woven, composed of irregular threads of different degrees of elasticity, this exclusive process consents perfect adherence to the surface of the skin enabling it to eliminate impurities even in the most minute cavities, such as pores. When this fibre becomes wet it expands and forms fine lines which consents the glove to delicately eliminate dead cells without scratching or irritating the skin.

Microscopic view of the fibre.

Fine fibers entwined to consent perfect adherence to the skin during massage.

The outcome of a five-year Italian study, the Magic Peeling Exfoliator Glove®, which has been patented around the world, has received top ratings from the Pharmacology Institute of the University of Pavia. This institute has certified its effectiveness and complete tolerability for any type of skin, even the finest and most delicate facial skin. The Magic Glove will last up to 6 months with the proper care, in other words for few cents a day your skin will exfoliate and look rejuvenated.
